WORKSPHERE AND EQUENS SIGN FIVE-YEAR MAINTENANCE AND MANAGEMENT CONTRACT

UTRECHT, 5 March 2007 – Effective 1 February 2007, WorkSphere BV was officially appointed to carry out maintenance on all the buildings of Equens Nederland BV (previously Interpay). The five-year maintenance and management contract includes all activities related to building management service, the maintenance of all systems and buildings, and the execution of relocations and spatial management. The contract therefore involves supplying an integral full-service package at both a tactical and operational level.

Equens is aiming to optimise the yield on systems and buildings by introducing effective operational management. To this end, WorkSphere supplies maintenance concepts and maintenance methods based on performance indicators for both quantity and quality alike.

“The Equens assignment fits in well with WorkSphere’s strategy of taking over complete responsibility for buildings and installations for the principal. In so doing, we offer our customers the security of knowing that they will be occupying buildings that remain in a good state of repair throughout the contract period,” said WorkSphere’s general manager Marinus Schimmel. WorkSphere already provides an integral service package to companies such as the PCM Uitgeverij publishing house, Sara Lee and Amsterdam Airport Schiphol.

Equens supplies a comprehensive range of services for processing payment transactions throughout the euro zone. Interpay Nederland and the German Transaktionsinstitut institute established the organisation in autumn 2006. Each year, Equens processes seven billion payment transactions. As such, it is one of Europe’s biggest payment processors.

WorkSphere BV, which forms part of the Strukton Group, specialises in providing services related to advice, design, realisation, management and maintenance of building-related installations and systems in the utilities sector. As a full-service provider, WorkSphere offers its customers a comprehensive service package in the area of climate control, lighting, energy, safety & security, building automation, and setting up server areas, lifts and communications facilities.
